SUMMARY

Full Stack Software Developer with a Master's degree in Computer Science, specializing in building high-performance financial trading platforms, real-time data visualization systems, and cross-platform applications. Expert in React/Next.js ecosystems with proven ability to optimize large-scale data processing, implement WebSocket architectures, and deliver production-grade solutions. Strong background in performance optimization, debugging complex issues, and cloud infrastructure. Experienced in React, JavaScript, TypeScript, Python, FastAPI, PostgreSQL, MongoDB, AWS, and CI/CD pipelines.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL

Frontend: React.js, Next.js 14, HTML5, CSS3, Tailwind CSS, shadcn/ui, Recharts, Framer Motion

Backend: FastAPI, Node.js, Express.js, Spring Boot, REST APIs, WebSocket, Microservices

Databases: PostgreSQL, MongoDB, Prisma ORM

Performance: Web Workers, WebAssembly (WASM), Code Splitting, SSR, CSR, SSG

Mobile/Desktop: React Native, Expo, Tauri, Plasmio

DevOps: Git, GitHub Actions, CI/CD, AWS (Amplify, EC2), Docker, Nginx, Certbot

State Management: Zustand, React Query, Context API

Authentication: NextAuth, Better Auth, JWT, OAuth

Testing: Cypress, Jest, React Testing Library

PROFESSIONAL EXPERIENCE

Full Stack Engineer | Blockhouse, NYC

September 2024 - October 2025

- Developed real-time crypto trading dashboard processing 10,000+ WebSocket messages per second with sub-second latency, optimizing large dataset rendering (100,000+ data points) using Web Workers and WebAssembly for 3x faster risk calculations
- Built production-grade equities Order Management System (OMS) with FastAPI backend and WebSocket architecture for real-time order tracking, scheduling, and execution analytics including TWAP/VWAP analysis
- Created cross-platform applications using React Native/Expo (mobile), Tauri (desktop), and Plasmio (browser extension) with Plaid integration for secure trade data retrieval
- Implemented reusable Next.js components with dynamic rendering (SSR, CSR, SSG) and Server Actions to securely proxy REST APIs without exposing endpoints to client
- Optimized application performance by debugging and resolving memory leaks, thread-related issues, and race conditions in WebSocket connections and worker threads
- Designed PostgreSQL and MongoDB database schemas with Prisma ORM, managing migrations, query optimization, and high-throughput operations

- Built comprehensive data visualization using Recharts for equity curves, performance metrics, Sharpe/Sortino ratios, and slippage distribution
- Implemented authentication systems with NextAuth and Better Auth, including email invitation feature with secure token generation and middleware-based access control
- Integrated smart order routing (SOR) algorithms and auto-flagging system with configurable rules for monitoring order performance metrics
- Configured CI/CD pipelines with GitHub Actions and Turborepo monorepo, ensuring automated testing with Cypress before deployment
- Managed AWS deployments: Amplify for frontend hosting with custom domain mapping, EC2 instances for backend services with Certbot SSL certificates and Nginx reverse proxy configurations
- Debugged production issues including memory leaks and optimized bundle sizes by 40% through code splitting and tree shaking, improving load times and runtime performance
- Tested React Native applications using Android/iOS emulators and physical devices, deploying via EAS to App Store and Google Play

Tech Stack: Next.js, React.js, TypeScript, Tailwind CSS, FastAPI, Python, WebSocket, REST APIs, Prisma ORM, PostgreSQL, MongoDB, NextAuth, Better Auth, Web Workers, WebAssembly, Recharts, Zustand, React Native, Expo, Tauri, Plasmio, Plaid, GitHub Actions, Turborepo, Cypress, Sentry, AWS Amplify, AWS EC2, Nginx, Certbot

Software Engineer Intern | Data Sense, Portland, OR

February 2024 - September 2024

- Developed modern, responsive web interfaces using React.js, Tailwind CSS, and ShadCN component library
- Built reusable components to streamline development workflow and improve code maintainability across multiple projects
- Utilized React Context API for state management, enabling efficient data sharing across multiple components
- Implemented CRUD operations using Prisma ORM with PostgreSQL database for efficient data management

Tech Stack: React.js, TypeScript, Tailwind CSS, ShadCN, Context API, Prisma ORM, PostgreSQL

Software Developer Intern | ValueLabs, Hyderabad, India

February 2022 - May 2022

- Developed and maintained web applications using React.js for frontend and Node.js for backend services
- Collaborated with cross-functional teams to deliver high-quality software solutions following agile methodologies
- Participated in code reviews and implemented best practices for code quality and maintainability
- Gained hands-on experience with full-stack development using JavaScript ecosystem and MongoDB database

Tech Stack: JavaScript, React.js, Node.js, Express.js, MongoDB

EDUCATION

Kennesaw State University, Georgia

August 2022 - December 2023

Master of Science in Computer Science

GPA: 3.9/4.0

PROJECTS

Group Video Call Application

- Developed scalable group video call application utilizing React, WebSockets, and WebRTC for seamless peer-to-peer communication
- Implemented real-time communication system supporting multiple concurrent users with low latency
- **Tech Stack:** React.js, WebRTC, Socket.io, Simple-Peer.js, Express.js, Node.js

ChronoMark: YouTube Video Timeline Bookmarker Chrome Extension

- Created Chrome extension to bookmark and manage specific timelines within YouTube videos
- Implemented intuitive user interface for easy addition, editing, and deletion of video bookmarks
- Leveraged Chrome Manifest V3 for secure and efficient extension development with persistent data storage
- **Tech Stack:** HTML5, CSS3, JavaScript, Chrome Extension APIs, Manifest V3
